

## Second Step

Now we're going to create the database tables and fill them with some default data.

*Finished!*

Now you can [log in](#) with the **username** "admin" and **password** "ab426a".

**Note that password** carefully! It is a *random* password that was generated just for you. If you lose it, you will have to delete the tables from the database yourself, and re-install WordPress. So to review:

Username

admin

Password

ab426a

Login address

[wp-login.php](#)

Were you expecting more steps? Sorry to disappoint. All done! :)
